

time & attendance for sage 200

Product Overview

Time & Attendance is a web based application that can stand alone but its real power comes into play with the integration to various Sage 200 modules from Sage & Sicon. Working in real-time linked directly to Sage 200 time can be allocated to projects, manufacturing or construction systems plus updated into Sage Payroll.

- **Web based application**
 - for easy installation and deployment to both internal and external users
 - ideal for multi-site organisations
 - **Locally installed**
 - runs on IIS & MS SQL server at your site not a remote web site
 - **Secure user login**
 - Users log in with unique pin code with configurable user permissions
 - **Links directly to Sage 200**
 - real time links to project accounting & Sicon job costing and works orders
 - **Enter time directly against projects and cost headings**
 - Projects and activities and can be loaded against each employee
 - **Sage Payroll integration**
 - authorised time can be updated to payroll and holiday information can be displayed
 - **User enquiry**
 - users can review time booked to ensure there time entries are complete.
 - **Designed for production and professionals people**
 - Running on Internet Explorer this application is available on any PC
 - PC users are presented with an alternate logon screen for speed of entry
 - Used by developers and professional people for time entry
 - **Fire List**
 - The system can produce a fire list per terminal location or assembly point
 - **Rosters**
 - complex rostering and shift patterns can be created within this system
 - each shift pattern can have a profile and each profile can be loaded with users
 - colour coded diary views help admin staff ensure all shifts are correctly loaded
 - **Integrated texting**
 - When staff are off sick text messages can be sent to people of the same grade to fill the shift for that day.
 - **Easy to learn**
 - screens designed for non-IT users
 - **Approval of time sheets and full audit trail**
 - supervisor approval routes available to view on every request raised
 - **Scalable solution**
 - Implemented on sites with 10 to several hundred users
 - making use of Microsoft IIS and Microsoft SQL Server technology
